NEXT SHOWS:

- ❖ Rockaria with The Frankinator and Friends from 3-6pm
- ❖ 4th Dimension until 9pm

MUSIC THEME   Nonsense Songs

A **nonsense song** is a type of song written mainly for the purpose of entertainment using nonsense syllables at least in the chorus. Such a song generally has a simple melody and a quick (or fairly quick) tempo and repeating sections

Tutti Frutti - Elvis

Tutti Frutti is a song written by Little Richard and Dorothy LaBostrie, recorded in 1955, which was his first major hit. With its energetic refrain, often transcribed as "A-wop-bop-a-loo-mop-a-lop-bam-boom!" (a verbal rendition of a drum pattern that Little Richard had imagined),[2] and its hard-driving sound and wild lyrics, it became not only a model for many future Little Richard songs, but also for rock and roll itself.[3]

After a lively performance by Little Richard who was getting frustrated with the recording session, he started pounding a piano and singing a ribald song that he wrote and composed, and which he had been performing live for a few years.

The original lyrics, in which "Tutti Frutti" referred to a homosexual man, were:

> Tutti Frutti, good booty
> If it don't fit, don't force it
> You can grease it, make it easy

These were replaced with:
> Tutti Frutti, aw rooty
> Tutti Frutti, aw rooty.

"Aw rooty" was a slang expression meaning "All right". And were revised for lyrical purity

Hi Lili hi Lo - The Shanes (orig. 1952)

Bibbidi-Bobbidi-Boo - Louis Armstrong (also called "The Magic Song") is a novelty song, written in 1948 by Al Hoffman, Mack David, and Jerry Livingston. Introduced in the 1950 film *Cinderella*

Zip-A-Dee-Doo-Dah - Louis Armstrong

Mah Na Mah Na - The Muppets

Rama Lama Ding Dong - The Boppers

Dum Dum Diddle - Abba

Ob-La-Di, Ob-La-Da - The Beatles

Do Wah Diddy - Neil Diamond

De Do Do Do, De Da Da Da - The Police

Ca Plane Pour Moi - Plastic Bertrand

Lady Marmalade - Christina Aguilera, Lil' Kim, M'Ya, Pink

Shoop Shoop Diddy Wop Cumma Cumma Wang Dang - Monte Video

Ilo Iko (My Bestie) - Justin Wellington, Small Jam

Last Time: Personal Hotspot

What is it and why would you use it?

It's a method of using your mobile phone to create a WiFi access point for other devices to connect to. This connection will share your mobile data usage amongst the connected devices.

You might find it useful if you live on your own or with a partner and don't consume much internet data but want to be able to send emails and search the internet. Not really useful for streaming movies and other large data transfers.

Apple iOS

1. Go to Settings > Mobile Data > Personal Hotspot or Settings > Personal Hotspot
2. Tap the slider next to Allow Others to Join
3. You can adjust the password if you like

When you connect a device to your Personal Hotspot, the status bar turns blue and shows how many devices have joined. The number of devices that can join your Personal Hotspot at one time depends on your service provider and iPhone model. If other devices have joined your Personal Hotspot using Wi-Fi, you can only use mobile data to connect to the internet from the host device.

Android

Settings -> Network & internet -> Hotspot & Tethering -> WiFi hotspot or Bluetooth tethering

- You may change the password if you like.
- You should be able to launch from the quick action buttons in settings.

This Time: Checking your data usage

Avoid bill shock by knowing how much data you are using and how much you have remaining for your billing period.

Understand your monthly data limits and check your usage via various methods to determine your usage patterns. This way you can manage your usage better and perhaps explore more suitable plans over time.

iPhone

Settings -> Mobile -> Mobile Data

Android

Settings -> Connections (& Sharing) - Data Usage

- Toggle between Mobile Data and Wifi
- Select period: Today, Yesterday, This Month, Last Month
- Set a data warning and reset your billing cycle if you would like to

Pixel Phones: Settings -> Network and Internet -> Internet -> Carrier (cog)

- Scroll down to see App data usage

Settings -> Network and Internet -> Internet -> Non Carrier Data usage (for wifi usage)

Your service provider (apps)

Generally you can install an App from your phone service provider (Telco) to monitor your data usage, get a copy of your invoices, change settings and to pay bills. If there is no App available there will be an online web page you can access with your login and password for your account.

In general

Prepaid - If you have a prepaid plan, when your data runs out, things just stop until you recharge

Postpaid - Check your plan fineprint to see if there are penalties if you go over your cap or choose an unlimited plan

Music News:

2. FROM THE NEWS AND SPECIAL INTEREST   Norton Accounts Breached

Recent weeks have seen a worrying development for Norton LifeLock customers all over the world: a recent data breach has potentially left thousands of accounts at risk of being accessed by criminal hackers. According to the company's data breach notice, these hackers have been able to gain access to customer password managers.

Gen Digital, the parent company of Norton LifeLock, were quick to point out that this was a credential stuffing attack rather than a compromise of its systems. Credential stuffing is where previously acquired data is used to attempt to break into accounts on different sites where users share the same password.

Norton has automatically reset passwords for the affected accounts and letters have been sent out to over 900,000 users advising of the potential risk. As usual be vigilant and question any correspondence you are receiving from anyone regarding access to accounts, password resets and anything related to your personal data.

Music News: A new way to search Google

The world has gone mad recently with the introduction of a chatbot called ChatGPT. For those of you unfamiliar with ChatGPT, Microsoft recently joined forces with OpenAI to focus on ChatGPT as the future in AI. ChatGPT will answer questions, perform calculations, write essays and much more… all in seconds. Incidentally, there are currently approximately 100 million active users in January, just 2 months after the official launch.

Well, in response, Google is testing an alternative search homepage using its own chatbot called "Apprentice Bard" in a question and answer type scenario. This will get interesting in the coming year.

Music News: **Tiktock banned in US schools and universities**

As the world continues to grapple with the ever-changing digital landscape, many schools and universities in the United States are taking a stand against one of the most recent additions to popular culture: TikTok. The short-form video-sharing app has been gaining traction among young people since its launch in 2016, and its popularity has only grown since then.

At first glance, TikTok may appear to be a harmless way to pass the time or to create fun videos. However, many schools and universities have begun to recognize the potentially harmful effects that an app designed to reward users for creating outrageous and often inappropriate content can have on their students. In response, dozens of schools across the United States have taken the step of banning TikTok from their campuses.

The most common reason cited by schools and universities for banning TikTok is that the app poses a threat to student safety. TikTok is notorious for its lax privacy settings, allowing anyone to view and share content without the user's knowledge or consent. This can lead to the sharing of inappropriate content, such as explicit videos or images, which can be seen by children of all ages. Additionally, the app's trending videos often feature dangerous stunts and activities that can encourage students to put themselves in harm's way. The most recent reported incident involved a young Puerto Rican man who fell to his death while sightseeing and filming a video TikTok off the cliffs in Cabo Rojo.

In addition to the potential safety risks posed by TikTok, many schools are concerned that the app's overstimulating content can be a distraction from learning. The app's interactive nature encourages students to be constantly scrolling, liking, and commenting on videos, which can be a major distraction from academic activities. Schools also worry that the app's focus on fame and celebrity culture could have a negative impact on students' self-esteem and mental health.

It's clear that the potential risks posed by TikTok have caused more than a few educational institutions to ban the app from their campuses. While this may seem like a drastic measure, it's important to remember that schools and universities have a responsibility to create a safe, productive learning environment for their students. By taking the step of banning TikTok, these institutions are sending a clear message to their students that their safety and well-being are the top priority.

Music News: **Samsung drops a whopper**

This year in Samsung's new phone lineup, they have dropped three new phones, one of which has a whopping 6.8" screen. The S23 Ultra dwarfs the competition in the non-folding range and promises to be an excellent premium phone in 2023. Samsung is just that little bit bigger than close rivals iPhone 14+ and Max, Google Pixel 7 Pro, Motorola Edge + and the One Plus 10 Pro. Of course the Samsung Galaxy Z Fold 4 boasts a 7.6" screen when open which is just a tad smaller than an iPad mini..

That's it, all the tech news that matters on Making IT Easy only on 107.3 HFM
