Music Theme	Music Theme - April Fools

(B) Fool Such as I - Elvis Presley with the Jordanaires

> 1952 written by Bill Trader. This version was recorded on June 10, 1958, at RCA's Studio B, Nashville, while Elvis Presley was on leave from the Army. The recording featured guitar by Hank Garland, Chet Atkins and Presley, bass by Bob Moore, drums by D. J. Fontana and Buddy Harman and piano by Floyd Cramer and backing vocal by the Jordanaires, with the bass voice provided by Ray Walker.

What Kind Of Fool Am I - Sammy Davis Jr

> 1962 - written by Leslie Bricusse and Anthony Newley. This song was the inspiration for a Gary Larson cartoon depicting scientists examining human subjects with the caption "Yes, they're all fools, gentlemen... But the question remains, 'What KIND of fools are they?'".

April Love - Pat Boone

> 1957 music by Sammy Fain and lyrics by Paul Francis Webster. It was written as the theme song for a 1957 film of the same name starring Pat Boone and Shirley Jones and directed by Henry Levin.

> Helped by the release of the film, "April Love" became a number-one hit in the United States for Pat Boone,[1] and spent twenty-six weeks on the US pop charts (it spent 6 weeks at number 1).

Why Do Fools Fall In Love - Frankie Valley & The Four Seasons

    1956 by American rock and roll band Frankie Lymon & the Teenagers ranked No. 314 on the *Rolling Stone* magazine's list of The 500 Greatest Songs of All Time.

If You Gotta Make A Fool Of Somebody - Freddie & the Dreamers

    1961 is a song written by Rudy Clark and first recorded by James Ray in 1961. In 1962, the Beatles began to perform the song at their gigs "we did a version of it because we thought it was such a wacky waltz. No one had a 3/4 number. And an R'n'B waltz, that was new! Manchester beat group Freddie and the Dreamers heard the Beatles play the song at the Cavern in Liverpool in September 1962, and soon began to incorporate it into their own act.

Poor Little Fool - Ricky Nelson

    Sharon Sheeley wrote this song when she was 15 years old. She had met Elvis Presley, and he encouraged her to write. It was based on her disappointment following a short-lived relationship with Don Everly of The Everly Brothers. Sheeley sought Ricky Nelson to record the tune. She drove to his house, and claimed her car had broken down. He came to her aid, and she sprang the song on him. Her version was at a much faster tempo than his recording.The recording features the background vocals of the Jordanaires

Chain of Fools - Aretha Franklin

    1967 Written by Don Covay who had been asked by Jerry Wexler, producer with Atlantic Records, to create songs for Otis Redding, Covay recorded a demo of "Chain of Fools", a song he had written in his youth while singing gospel with his brothers and sisters. Listening to the demo, Wexler chose to place the song with Aretha Franklin rather than Redding. It became one of her string of hit singles.

I Pity the Fool - Bobby Bland
1961 - Soul Blues

April Sun in Cuba - Dragon 1977

Fooling Yourself (The Angry Young Man) - Styx

    The song was written by guitarist Tommy Shaw. It was originally based on Shaw's initial perception of Styx keyboardist Dennis DeYoung — an "angry young man" who viewed the group's successes with a wary eye and grew angry or depressed with every setback. It was only in later years that Shaw began to see himself in the lyrics, and the song took on a more personal meaning to him.

    The composition features a number of time signature changes. The intro and outro are performed in $\frac{6}{8}$ time, led by Shaw's acoustic guitar tracks and Dennis DeYoung's synthesizer melodies. The vocal sections of the song are in $\frac{4}{4}$. The instrumental features a synthesizer solo in $\frac{7}{4}$ time, before returning to $\frac{4}{4}$ for the final chorus. After a brief intro recap, there is a brief break with two measures of $\frac{5}{8}$ time, and then a return to the $\frac{6}{8}$ meter, with another synthesizer solo, before fading out.

What a Fool Believes - The Doobie Brothers

    written by Michael McDonald and Kenny Loggins. Loggins released his version July 1978, 5 months later the Doobie Brothers released their version in 1979 and Aretha Franklin did a cover in 1980. Here are all three :-)

Fool To Cry - The Rolling Stones
The Rolling Stones from their 1976 album *Black and Blue*

The Joker - Steve Miller Band
"**The Joker**" is a song by the Steve Miller Band from their 1973 album *The Joker*. More than 16 years later, in September 1990, "The Joker" reached number one on the UK Singles Chart for two weeks after being used in a TV ad for Levi's, thus holding the record for the longest gap between transatlantic chart-toppers.

Extra Songs:-

Your Latest Trick - Dire Straits 1986 (Big opening) (starts fadeout at 30 sec from end)

(B) April in Paris - Billie Holiday 1932 (sax opening until 12 sec) (finishes 5 sec early)
Composer Alec Wilder writes, "There are no two ways about it: this is a perfect theater song. If that sounds too reverent, then I'll reduce the praise to 'perfectly wonderful,' or else say that if it's not perfect, show me why it isn't."

(B) April Come She Will - Simon & Garfunkel 1965 (song 1:49 total)

(B) Fools Fall In Love - Elvis Presley 1966. Originally recorded by the Drifters 1957

(B) Fools Rush In (Where Angels Fear to Tread) - Guess the artist (you'll get it at 22 sec in) :-)
Louis Armstrong

(End Song) Won't Get Fooled Again - The Who (Intro important 29 opening sec to talk over) (Out from 2 min to end)

It has been performed as a staple of the band's setlist since 1971, often as the set closer, and was the last song drummer Keith Moon played live with the band.

As well as being a hit, the song has achieved critical praise, appearing as one of *Rolling Stone*'s The 500 Greatest Songs of All Time. It has been used for several TV shows and films (such as the theatrical trailer of *Robots*, *Hobbs & Shaw*, *Top Gun: Maverick*, the television commercial of the 2008 film *Yes Man*, the Season 12 episode "A Tale of Two Springfields" from *The Simpsons*, the 2005 film of *Bewitched* and most notably *CSI: Miami*), and in some political campaigns.

STINGER	NEWS

3	NEWS 1 - Stop AI before it's too late

An open letter has been published regarding the risks of continuing with AI in its current form.
"these advanced new AI models could pose "profound risks to society and humanity,"

"We call on all AI labs to immediately pause for at least 6 months the training of AI systems more powerful than GPT-4. This pause should be public and verifiable, and include all key actors. If such a pause cannot be enacted quickly, governments should step in and institute a moratorium." The key point are:

- Earlier this month, the fourth version of Open AI's GPT program was released, which can engage with users in human-like conversation
- The open letter urging the pause was signed by more than 1,000 people, including some big names in AI
- EU police force Europol warned about the potential misuse of the system in phishing, disinformation and cybercrime
-

I wonder if this has anything to do with the failed takeover bid Elon directed at Open AI before this all began… or the fact that Microsoft seems to be calling the shots?

STINGER	NEWS 2 - Social Media lawsuit

It's no secret that social media has taken the world by storm. It's been an integral part of our lives for years now, and its prevalence in our everyday lives only continues to grow. While there is no denying the power of social media, it can also be argued that the platforms have a negative effect on the mental health of many of its users.

The San Mateo County Board of Education and Superintendent Nancy Magee are taking a stand on this issue. This week, they filed a 107-page lawsuit against some of the world's largest social media companies – YouTube, Google, Snap Inc., and TikTok – citing their alleged contribution to plummeting mental health among consumers.

The lawsuit argues that these platforms have created a "destructive environment for children" and put the responsibility of caring for their mental health on the shoulders of teachers and parents. The lawsuit further claims that the companies have failed to regulate their content to ensure the health and safety of the children using their products.

The lawsuit is an unprecedented move for a school board to make and highlights the growing concern about the mental health of children and adolescents in the United States. It is estimated that 1 in 5 children in the US are affected by mental illness, with many more struggling with substance abuse and other mental health issues.

The lawsuit also calls out the companies for their use of manipulative tactics to keep users engaged, such as the use of algorithms to curate content, notifications, and other features that can be used to keep users hooked for hours. This can lead to unhealthy usage habits and an addiction to social media.

STINGER	NEWS 3 - Aussie Muscle EV

It's official: the Ford Mustang Mach-E is finally coming to Australia! After much anticipation, the electric SUV will be available to buy in Australia in Q4 2023. This is a momentous occasion for the automotive industry and could signal the start of an electric revolution in Australia.

The Mustang Mach-E was unveiled at the Melbourne Grand Prix over the weekend, showcasing the car's unique features and design. The Mach-E will be offered in three different variants, meaning there should be something that suits every customer.

The Mach-E will be the first consumer-level electric vehicle offered by Ford in Australia and follows the launch of the Ford E-Transit commercial van. The iconic Mustang name has been a part of Ford for decades and the Mustang Mach-E can be seen as the brand's next step in the electric revolution.

The Ford Mustang Mach-E is the perfect blend of style, performance, and technology. It has an impressive range of up to 483 kilometres and can be fast-charged up to 80% in just 45 minutes. The Mach-E also offers a plethora of driver-assist features, designed to make your life easier and safer on the roads.

STINGER	NEWS 4 - Moon-Fi

As a leader in the telecommunications industry, Nokia is once again pushing boundaries with the announcement of a new 4G mobile network on the moon. The network is set to launch later this year on a SpaceX rocket, and is a part of Nokia's effort to increase lunar discoveries and eventually pave the path for human presence on the satellite planet.

The network will be powered by a Nova-C lunar lander designed by U.S. space firm Intuitive Machines, and an accompanying solar-powered rover. An LTE connection will be established between the lander and the rover, and the infrastructure will be located on the Shackleton crater, which lies along the southern limb of the moon.

At the recent Mobile World Congress trade show in Barcelona, Nokia's principal engineer, Luis Maestro Ruiz De Temino, spoke about the network, claiming that the technology is designed to survive the extreme conditions of space, and is capable of providing high-speed, reliable connections that are essential for the success of this project.

4	Something for Nothing - Podcasts

What is a Podcast?
An individual or group of digital audio/video files that can be downloaded to then listen and view.
Often podcasts are part of a series which you can subscribe to.
Listen to podcasts on-the-go from many sources on PC/mobile devices
Ask Siri, Google, Alexa

Listening to podcasts is an increasingly popular way to access content. Whether you're listening to music, educational articles or entertainment shows, podcasts offer a unique way to access and engage with content. But why should you use podcasts? Here are some of the key reasons:

Convenience
Podcasts are incredibly convenient. You can download them to your device and listen to them whenever you want. You don't have to be connected to the internet to listen to them, so you can take them with you on your commute or while you're out and about. As a result, they're one of the most accessible ways to access content.

Quality
Podcasts are often of a high quality. Many are hosted by professionals, who have a lot of experience in the field. This means that the content is often accurate and engaging.

Variety
The range of podcasts available is staggering. No matter what kind of content you're looking for, there's likely to be a podcast that covers it. Whether you're looking for the latest music hits, educational articles or entertainment shows, there's sure to be a podcast for you.

Cost
Most podcasts are free, making them one of the most cost-effective ways to access content. This means that you can explore a variety of topics without spending any money.

Engagement
Podcasts are incredibly engaging. You can listen to them while doing other activities, such as driving, exercising or cleaning. This makes them perfect for multitasking.

Overall, listening to podcasts is an excellent way to access content. Whether you're looking for music, educational articles or entertainment shows, podcasts have something to offer. They're convenient, of a high quality, varied, cost-effective and engaging. So why not give them a try?

Places to get podcasts
Podcast Apps on Apple, Android and Windows including Spotify, podcasts.google.com, TuneIn, Stitcher

5	TECH HISTORY - WHAT HAPPENED THIS WEEK

Kodak releases the DC40 camera. The second digital camera for the consumer market after Apple's Quicktake 100.

20 year old Bill Gates gives the opening address at the First Annual World Altair Computer Convention in Albuquerque, New Mexico, giving a talk about software piracy.

The first truly long distance telephone call (235 miles) was made by Alexander Graham Bell to his assistant Mr. Watson from Boston to New York City. The call lasted 90 minutes before the line failed.

The first e-mail virus called Melissa, caused widespread damage and was one of the fastest spreading viruses in history. Melissa was released into the wild on an early Friday morning and within three days would infect around 250,000 computers around the world.

Radio Shack introduced the TRS-80 Model 100, one of the first portable computers in a notebook-style form factor.

6	MUSIC HISTORY - WHAT HAPPENED THIS WEEK

1985 - Phil Collins
Phil Collins started a two week run at No.1 on the US singles chart with 'One More Night', his second US No.1, it made No.4 in the UK. The track was taken from his third album, No Jacket Required.

1974 - John Denver
John Denver went to No.1 on the US singles chart with 'Sunshine On My Shoulders', the singers first of four US No.1's. Denver was killed in a plane crash on 12th October 1997.

1963 - Lesley Gore
16 year-old Lesley Gore recorded her breakthrough hit, 'It's My Party'. The song produced by Quincy Jones went on to be a US No.1.

SONG	

7	FUTURE TECH from the Innovation Hub - Smart Clothing

We are all familiar with the traditional handshake – a friendly gesture that is used to communicate a desire for social interaction. It is a traditional way to meet someone and share information, but the future of handshaking could be very different.

Researchers at the University of California have been working to develop a new generation of smart clothes that use sensors and integrated circuits to exchange data and activate devices. This technology is set to revolutionise invisible computing, and it could make the handshake a new way to instantly share information.

The way it works is simple. A person wearing smart clothes would be able to instantly transmit their contact information to someone else simply by shaking hands using a type of NFC. It could be anything from their first and last name to their address, phone number, or email address. This technology could also be used to activate devices, such as a computer or a smartphone.

There are passive, active, or even ultra-intelligent smart clothing that adapts to the environment as if it were an organism. Examples include:
- Pyjamas with sleep-monitoring capabilities
- Footwear or socks with an integrated pedometer
- Belts with warning systems in work environments
- T-shirts that measure heart rate
- Haptic garments for people with deafness
- Jackets with integrated heat capacity and thermostats

9	TECH - THE ABSURD

L-Pee
It's official. Vinyl is back and grosser than ever. Melbourne band - Private Function have just taken the vinyl revival a step further with the announcement of their new album 370HSSV 0773H, which is set to be released in a limited edition 'Gold' pressing of 50 LPs, each of which has been infused with the band members' own urine.

The groundbreaking news was shared on the band's Instagram page in a reel of the members emerging from the bathroom, each of them holding containers filled with urine. The caption read: "Congratulations to the 50 people who ordered the 'Gold' version of our new record. You just bought a liquid disc full of our piss. We worked with local legends @saltydog.records to build the world's first piss-filled record, it turns out it's really hard."

Private Function have yet to reveal what the pee-filled LP (or should we say L-pee?) will look like, but we're guessing the 'Gold' moniker gives us a pretty good idea. The band have a final request to share with the world: "Please don't use our DNA to commit crimes."

Robo Lips

It's official: you can now kiss your long-distance partner from miles away. Thanks to the innovative minds at Chinese startup MUA, you can now send your kiss data to the other person through the use of their revolutionary long-distance kissing machine.

This machine is equipped with motion sensors hidden in silicon lips that move simultaneously while replaying the kiss data that was sent. On top of that, the device also captures and replays sound, and even warms up slightly during the kissing process.

If that wasn't enough, users can also download kissing data submitted by other users via an accompanying app.

The machine was released to the public recently for people to review and the reviews were mixed. Some users described the experience as feeling like 'a warm pacifier', while others complained about the lack of tongue action.

Regardless of the mixed reviews, this machine still stands as a revolutionary device that could make long-distance relationships a little bit easier. This machine is sure to be a hit amongst couples who are not able to physically be together, providing them with a way to share a special moment together without having to be in the same room.

So if you're looking to spice up your long-distance relationship, why not give MUA's long-distance kissing machine a try?

10	LISTENER QUESTION

What's the best way to take a photo on my phone and send it to someone?

Camera: Take photo in the photo app (which saves it in photo gallery)
Go into the gallery, select the photo and select share or share to apps and choose recipient via the app
WhatsApp
Messenger
SMS/MMS
eMail
Facebook

App: You can generally take a photo from within a specific app and forward directly. The gotcha here is you may not have the photo outside of the app to then send via other methods. But not always the case. Sometimes the photo gallery has specific backup folders for apps.

SONG	

11	APP OF THE DAY - Flybuys and Everyday Rewards

Flybuys

You may have noticed that Coles have stopped giving fuel vouchers.
You can scan your flybuys card from your phone/app
Points are stored and retrieved in the Flybuys app

As you scroll down the app you also scroll across the menu (you can jump the the part you want.
Activate before you pay for fuel

It's all about the Offers (at the bottom) which appear in the app automatically.

Rewards

You can see your activity and actual purchases
Convert to Qantas points
Fuel voucher tally
You can opt for eReceipts

SONG	

12	GAME OF THE WEEK

Theme	Mahjong Solitaire - Game Music

Mahjong is a tile-based game that was developed in the 19th century in China and has spread throughout the world since the early 20th century. It is played by four players (with some three-player variations). There is also a solitaire version which is sometimes referred to as mahjong solitaire.

A puzzle is created in various shapes or formations and you must remove matching pairs until all the pieces have been removed.

The only rules are that the selected pieces must match and the pieces you select cannot be boxed in - meaning, they need to be able to move left or right without disturbing other tiles.
The game is won when all pairs of tiles have been removed from the board, and lost if the remaining tiles contain no exposed pairs.
The computer games often light up the pieces that can be selected… while you are learning (swipe to find settings 🙂)
Apple - Mahjong!!
Android - Mahjong (Canary Droid)
Microsoft Mahjong from the Microsoft Store

SONG
